Advertising imprints (print data/paper proof/proof sample original):

We require printable data 1:1 (vectorized pdf data - Files converted into paths) for the creation of the print previews. Minimum resolution: 300 dpi - If the data supplied is still heavily edited or reworked, the effort will be charged at 50.00 € per hour.

The customer receives a proof in electronic form. The effective design / finishing can differ slightly in colour because the color reproduction can differ slightly on different materials as paper. We recommend to pre-fabricate a printing proof sample, especially with delicate colors and complex logos. The costs will be charged to the buyer.

Light colour variations are not to be avoided and accepted.

Important hints for the making of screenprint and tampon print for boards.

In the price list the **FILM** sign with the letters T or S below indicates the film type required 1:1. Raster films cannot be enlarged or reduced in size!

The letters mean the following T = tampon print S = screen print

T-films, Layer down

For 1- to 4-colour print, print adjustment marks are necessary. They have to be at a distance of at least 30 mm from the motive. The neutral zone (30 mm between motive and adjustment marks) must be without any marks or notes! We need one film for every colour. The film material must be at least 100 x 100 mm in length + width. We print in the 56 halftone screen.

S-films, Layer up

In the case of multi-colour prints, possible increment is may be necessary. Raster prints according to the Euroscale up to 28 grids. Real colours can not be printed with halftone screen.

Line intensities: tampon printing 0.5 dot = 0.15 mm, screen printing 1.0 dot = 0.40 mm
